Acceptance testing

For the acceptance testing we decide to used Cucumber.io and probe 4 test.

Test #1

- As first test we verified is the web application is running good in the internet
- We give the url.

Running the Test #1
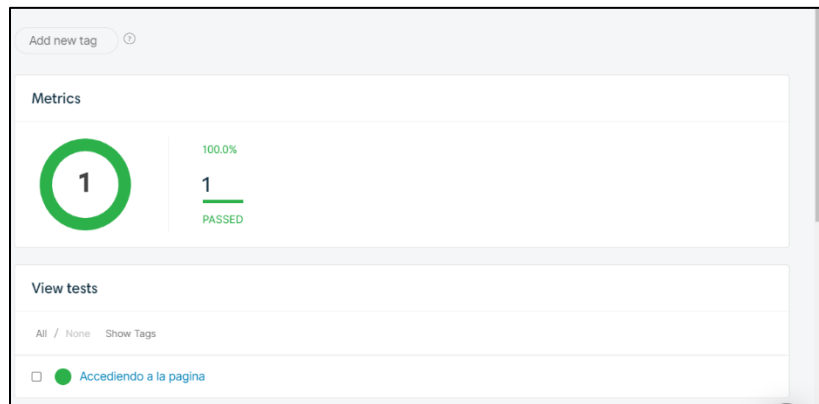

Test #2

- The user is in the login section has to introduce all the valid parametres

The navbar must change

Test #2

Clone

succesful log-in to the user acount in the hosteria because the email is register in database
